Summary

Cloud and DevOps Engineer specializing in secure distributed systems, cloud infrastructure optimization, and production-grade CI/CD automation. Experienced in AWS and GCP environments, observability-driven reliability engineering, and secure hybrid device-to-cloud integrations. Proven track record of reducing infrastructure costs, accelerating deployments, and strengthening enterprise system security.

Experience

DevOps Engineer, kpi.com – Tashkent, UZ May 2023 – Oct 2026

- Architected and deployed a centralized observability stack (Prometheus, Grafana, Loki, Alertmanager), improving system visibility and reducing incident response time by 60%
- Designed and implemented a secure cloud-based attendance integration using Hikvision face recognition devices over ISUP 5.0 (outbound TLS), eliminated inbound exposure at client sites while enabling secure API-based integrations
- Built a custom Prometheus exporter in Python to expose business KPIs for real-time monitoring and data-driven decision-making
- Automated database schema synchronization across dev/stage/prod environments via a Python CLI tool, reducing manual errors and operational overhead
- Optimized AWS infrastructure (EC2, S3) and implemented Savings Plans, reducing monthly cloud costs by 20%
- Prevented production outages by identifying Tomcat thread exhaustion bottlenecks and implementing automated recovery mechanisms
- Strengthened CI/CD security and performance by upgrading legacy GitLab Omnibus to the latest stable release

DevOps Engineer, PraaktisGo – Tashkent, UZ Jan 2025 – July 2026

- Led zero-downtime migration of production AWS infrastructure to a new AWS account and region, ensuring full data integrity and uninterrupted service availability
- Achieved 99.9% system uptime by implementing proactive monitoring, alerting, and incident prevention mechanisms
- Reduced deployment time by 50% through CI/CD automation with Jenkins and environment standardization using Docker
- Designed and implemented cross-cloud cost tracking and performance monitoring strategy to support long-term hybrid-cloud scalability
- Secured $100K in Google Cloud credits (GFS Cloud Program 2024) and $10K in AWS Activate Portfolio credits to accelerate infrastructure expansion and experimentation
- Optimized infrastructure costs and reduced operational overhead by 15% through strategic use of Google Workspace Business Plan and cloud cost governance practices
- Enforced security best practices across AWS and GCP environments, including IAM hardening, network segmentation, and controlled access policies
- Documented cloud architecture, deployment workflows, and operational standards to improve team onboarding and system continuity

Frontend Engineer (Intern), DataSite Technology – Tashkent, UZ Sep 2022 – May 2023

- Developed responsive web interfaces using HTML5, CSS3, JavaScript, and React
- Translated Figma designs into functional production-ready pages
- Collaborated with backend and DevOps teams, gaining early exposure to deployment workflows and version control practices

Education

Tashkent State University of Economics, Bachelor's Degree in **Economics** 2022 – 2027

Technologies

Cloud: AWS, GCP

Containers and Orchestration: Docker

CI/CD: Jenkins, GitLab CI, GitHub Actions

Observability: Prometheus, Grafana, Loki, Alertmanager, ELK, Datadog

Infrastructure and Security: Linux, Nginx, Apache Tomcat, Vault, Networking, Load Balancing, DNS

Databases: PostgreSQL, MySQL, MongoDB, Redis

Languages: Python, Bash

Languages

Uzbek (Native) | English (C1 - Advanced) | Russian (A1 - Basic)
